

THE NEW STANDARD OF IMAGE REVIEW

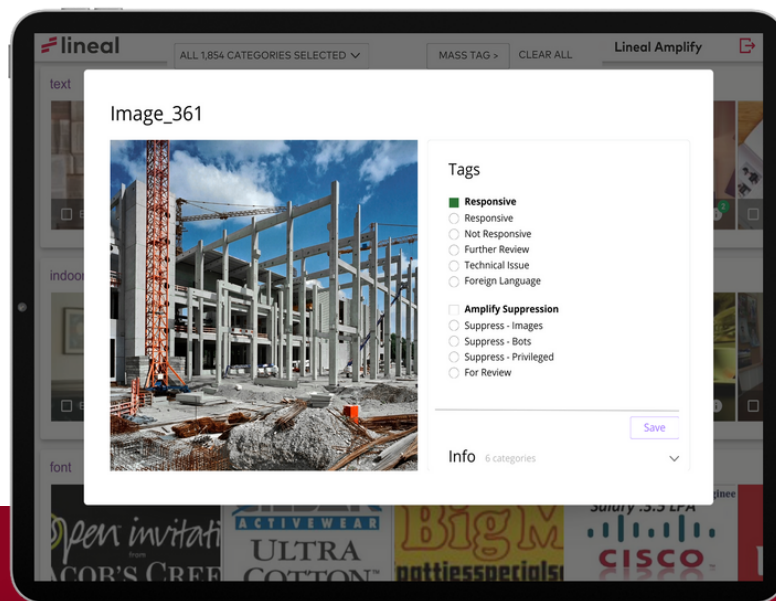

IMAGES

THE NEW PARADIGM

Navigating the maze of modern eDiscovery, Lineal Images™ emerges as a beacon of innovation, tackling the formidable trio of challenges: the overwhelming volume, the rapid velocity, and the diverse variety of contemporary data. In 2023 alone, an astounding estimate of 1.6 trillion photos will be taken, as reported by Rise Above Research. This monumental figure underscores the critical need for advanced tools capable of navigating the vast ocean of image data.

Born from the necessity to streamline the increasingly complex task of image review, this AI-powered interface, seamlessly integrated within Relativity, revolutionizes the handling of graphic files. Lineal Images is our answer to the pressing demands of today's data-rich legal environments, where efficiency, precision, and adaptability are not just desired but essential to the integrity of the legal process.

Bulk Tagging Efficiency

With its integration into Relativity™, Lineal Images elevates the speed and accuracy of bulk tagging during the review process.

Intuitive Review Format

Advanced AI sorts image data into an easily navigable "Netflix-style" format, enabling swift identification and tagging of non-essential imagery.

Granular Image Conceptualization

Lineal Images' sophisticated AI offers detailed classification of image content for thorough and precise review and tagging.
