

# Strengthening Privilege Review Efficiency by 30%

How Lineal used Amplify tools to streamline privilege screening in a patent litigation.

## CHALLENGE

A client needed to produce all non-privileged documents quickly and accurately in a patent litigation case. Their initial privilege screen over-included documents, risking delays and excess cost. Errors or delays risked privilege waiver, rework, and missed production deadlines.

## OUR APPROACH

We deployed Amplify's PrivFinder and Bots to improve privilege screening speed, accuracy, and defensibility by:

- Adding justification logic to each privilege decision
- Identifying false positives in the existing privilege screen
- Delivering a refined review set ready for production

## OUTCOME

The team met production deadlines on time and under budget while improving privilege accuracy and reducing rework risk.

**21,717**  
Documents

**\$7,412**  
Total Cost

**2-Day**  
Turnaround

**20% Increase**  
in Accuracy
